EDUCATION

Delhi Public School Megacity

ICSE - Science - **Percentage - 97%**

03 2006 – 03 2020

Rajarhat, West Bengal

St. Xavier's Institution

ISC - Science - **Percentage - 95.5%**

04 2020 – 04 2022

Panihati, West Bengal

Indian Institution of Information Technology, Kalyani

BTech in Computer Science Engineering - **CGPA - 9.39**

11 2022 – 05 2026

Kalyani, West Bengal

COURSEWORK / SKILLS

- Data Structures & Algorithms
- Operating Systems
- Network Security
- Database Management System (DBMS)
- Artificial Intelligence
- OOPS Concept
- Backend Development
- Machine Learning
- Basic Cryptography

TECHNICAL SKILLS

Languages: Python, Java, C, SQL, NoSQL

Developer Tools: VS Code, Android Studio, DataGrip, Goland, IntelliJ Idea Ultimate

Technologies/Frameworks: Linux, GitHub, ReactJS, Redux, NextJS, NodeJS, ExpressJS, Git, Mongo, Flutter, Flask, Django, FastApi

PROJECTS

WildGuard360 🚀 | [Flask](#), [React.js](#), [MongoDB](#), [PyTorch](#), [Firebase](#) (initial), [Node.JS](#)

2024

- Developed a Flask server to handle image classification with pre-trained ML models, achieving <2s average response time.
- Built endpoints to receive images, classify them via PyTorch, and return results with 91% accuracy.
- Integrated Google Maps API to locate nearby animal hospitals, reducing search effort by 60%.
- Added wildlife News API to the frontend, boosting user engagement during demos by 40%.

FaunaTrack 🚀 | [Python](#), [Flask](#), [PyTorch](#), [OpenCV](#), [Socket](#), [Raspberry Pi](#)

2023

- Developed a client-server architecture using Flask and sockets to transmit animal presence data and images.
- Configured Raspberry Pi with PyCam and ultrasonic sensors to detect motion and capture real-time images.
- Sent captured images from the Raspberry Pi to the Flask server for species classification using a PyTorch model.
- Automated the data flow from edge device to server, enabling real-time wildlife monitoring.

MediAssist – AI-powered Prescription Reminder System 🚀 | [Python](#), [Flask](#), [Twilio](#), [Google API](#)

2025

- Built and deployed Flask backend APIs for prescription management and automated medicine reminders.
- Applied LLMs to extract key details from prescriptions, reducing manual data entry effort by 70 percent.
- Integrated Google Calendar API for auto-scheduling reminders, streamlining medicine tracking.
- Implemented Twilio-based WhatsApp alerts, achieving 95percent timely delivery of reminders.

EXTRACURRICULAR

StatusCode2 Hackathon

2025

Participant (Team: AI Alchemists)

Offline

- Participated in StatusCode2 Hackathon as part of Team AI Alchemists, exploring tech-driven solutions for real-world problems.
- Participation Certificate

StatusCode1 Hackathon

2024

Wildlife Track Winner (Team: BiT_CaTs, Project: WildGuard)

Offline

- Led backend development of WildGuard in Team BiT_CaTs — a Flask-based system for wildlife classification and real-time SOS alerts.
- Won the Wildlife Track Prize for building an impactful application to support animal rescue and protection.
- Achievement Certificate
